

## **Group 42 Script Instructions**

We have 2 different scripts: A6.py and dailytests.py

How to run A6.py:

- Ensure that the database password and name is modified to the local database on your machine the parts of the code to be modified are found in lines 10 and 11
- Add the path to the directory where all the .py files are located on line 12
- The program is command line based and so all the controls are clearly labelled in the command line
- Running the program from this file will create the output files of the whitebox tests if used

How to run dailytests.py:

- Ensure that the A6.py file is in the same directory as dailytests.py in order to work
- Ensure that the path inserted in A6.py for the directory of the file is correct
- Execution but cause unexpected results if database not properly loaded or script not ran before. Thus, run the dailytests.py file more than once
- Results of the dailytests.py execution will be printed into a separate file called "daily\_test\_results.txt" in the same directory
